Maternal Health Risk Assessment Report

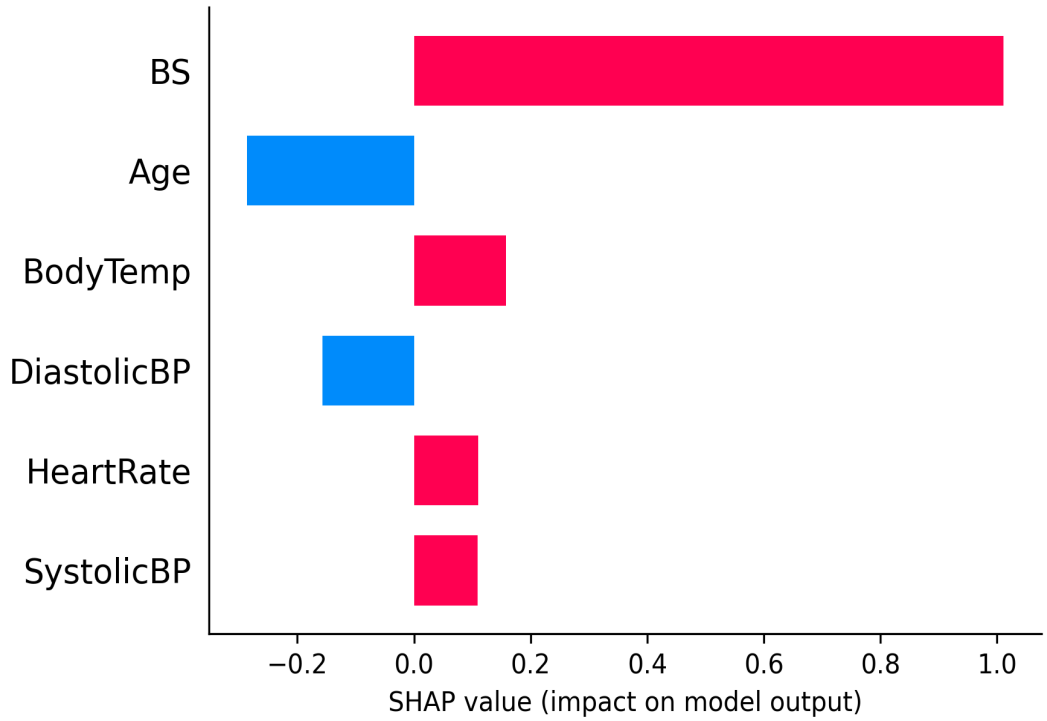

Patient Information

Name	XYZ
Age (years)	50.0
SystolicBP (mmHg)	120.0
DiastolicBP (mmHg)	80.0
BloodSugar (mmol/g)	7.5
BodyTemperature (F)	98.0
HeartRate (bpm)	70.0

Model Prediction

Predicted Risk Category: **LOW**
Prediction Confidence: 0.753000020980835

Model Explainability (SHAP)

The SHAP bar plot above illustrates the relative contribution of each clinical feature to the model's risk prediction for this patient.

Risk Summary

The patient is classified as low-risk based on current clinical parameters.

The following are expected to contribute to the risk: ['BS', 'BodyTemp']

• BS has a value 7.5 indicating Moderate hyperglycemia
• BodyTemp has a value 98.0 indicating Normal

Clinical Observations

• All major clinical parameters are within acceptable ranges. Continued monitoring is advised.

Lifestyle Recommendations

• Adopt small, frequent meals with low glycemic index foods, limit refined sugars, and monitor blood glucose regularly.

Medical Guidance

• All medications should be taken strictly under medical supervision, especially during pregnancy.

Conclusion & Disclaimer

The model indicates a low maternal health risk. Maintaining healthy lifestyle practices and routine monitoring is recommended.

This report is generated using a machine learning model and is intended to support, not replace, clinical judgment.
