Maternal Health Risk Assessment Report

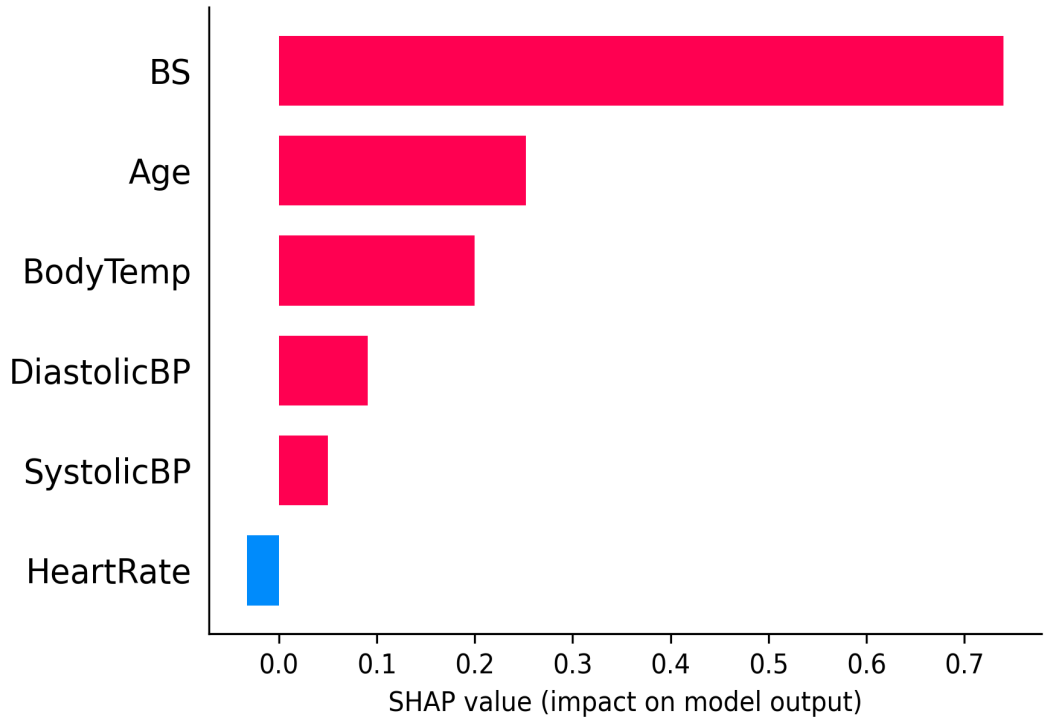

Patient Information

Name	XYZ
Age (years)	17.0
SystolicBP (mmHg)	90.0
DiastolicBP (mmHg)	60.0
BloodSugar (mmol/g)	6.9
BodyTemperature (F)	101.0
HeartRate (bpm)	76.0

Model Prediction

Predicted Risk Category: **MID**
Prediction Confidence: 0.8889999985694885

Model Explainability (SHAP)

The SHAP bar plot above illustrates the relative contribution of each clinical feature to the model's risk prediction for this patient.

Risk Summary

The patient is classified as mid-risk based on current clinical parameters.

The following are expected to contribute to the risk: ['BS', 'Age', 'DiastolicBP']

• BS has a value 6.9 indicating Moderate hyperglycemia
• DiastolicBP has a value 60.0 indicating Normal

Clinical Observations

• All major clinical parameters are within acceptable ranges. Continued monitoring is advised.

Lifestyle Recommendations

• Adopt small, frequent meals with low glycemic index foods, limit refined sugars, and monitor blood glucose regularly.

Medical Guidance

• Schedule a follow-up appointment with an obstetrician for further clinical evaluation.
• All medications should be taken strictly under medical supervision, especially during pregnancy.

Conclusion & Disclaimer

The model indicates a medium maternal health risk. Routine monitoring is recommended. Please schedule an appointment with the doctor for a follow-up.

This report is generated using a machine learning model and is intended to support, not replace, clinical judgment.
